

**SCOTTSDALE**  
CONSTRUCTION SYSTEMS

Apartment Complex - Edinburgh, Scotland

External Rain Screen Framing in Scottsdale 140mm profile and Internal Partitioning in 90mm Scottsdale Profile

**Steel Frame Partitions**  
0.75mm thick, 90mm profile

**Internal Partitions**

All apartment partitions were manufactured on demand & on-site with Scottsdale roll-formers located at ground level.

On-site measurements of frames were made on the same day as production to minimise errors.

This made last minute revisions to layouts possible to cater for construction variations, i.e.. Actual slab to slab & column tolerances against design/construction drawings.

Waste on-site was greatly reduced & critical path program accelerated.

**Steel External Frames**  
1.0 & 1.2mm 140mm profile for rain screen panels
